

linenTrace
BY WVINTECH

CLOUD EDITION

Know where every linen item is, on any device.

RFID linen tracking in the cloud for hotels and hospitals. Scan out, scan in, and see what is missing at once.

Computer

The full dashboard, reports and stock take at the linen room desk.

iPad and tablet

A big, clear scan screen for staff packing and checking batches.

Phone

Check status, scan and look up any tag from your pocket.

Nothing to install. Open it in any browser, or tap Add to Home Screen.

Pair it with a handheld RFID reader

Read many tags at once with a UHF handheld reader, shown here: the Seucic AUTOID UTouch 2.

Built for the way laundry really works

Linen leaves in bags and comes back in bags. linenTrace checks every item against what went out, so nothing disappears quietly.

Scan out, scan in, matched

Each returning bag is checked against what left. Missing items are flagged when the batch closes.

Live dashboard

Stock in the hotel, at the laundry and missing, with low-stock and overdue alerts.

Keeps scanning offline

If the internet drops, scans wait on the device and upload by themselves when it returns.

Wash count and damage

Count every wash, flag damaged or stained items, and retire worn linen. Claims report included.

Reports in Excel

Batch, period, missing, inventory, claims and stock take reports, ready to share.

Every hotel kept separate

Each hotel sees only its own data, with admin and staff roles for its own team.

How it works

1

Tag the linen

Each sheet, towel and gown carries an RFID tag.

2

Scan out

Scan the bag before it leaves for the laundry.

3

Scan in

Scan again on return. Every item is matched.

4

Know

Anything missing or damaged is flagged at once.

Secure, hosted and ready

Hosted in Kuala Lumpur over HTTPS with automatic backups. Each hotel has its own 2-year licence.
